JustPayments

Genius Drive-Thru
Buyer sheet

U.S. equipment planning reference • November 18, 2026

For restaurants where staff need to match each vehicle to the right order at pickup.

The enterprise drive-thru solution supports camera- or loop-based tracking to help staff follow orders through the lanes. The pictured outdoor panels show one part of an installation. Plan the lane layout, pickup points, camera placement and integration with the kitchen. The hardware mix is site-specific.

Buying question: How many lanes merge before pickup, and where do order mix-ups happen?

Confirm exact model, generation, region, enabled software features, mounting, power, network and accessories. Equipment, software, installation and processing are separate topics in a written quote. Photos are examples, not included bundles.
